Description

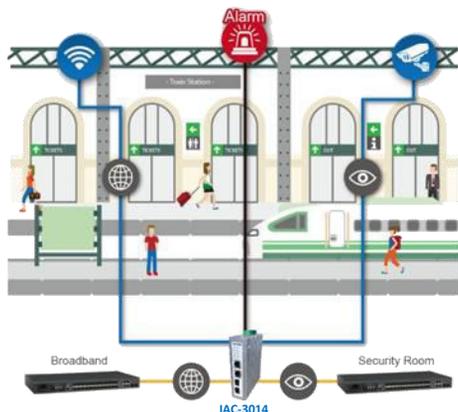

Connection Technology Systems (CTS) IAC-3014 media converter is a Gigabit Ethernet 10/100/1000Base-T to 100/1000Base-X media converter. The IAC-3014 media converter converts traditional twisted-pair RJ-45 cable into various fiber media including multi-mode, single-mode with SC connectors or bi-directional WDM to fulfill different requirements depending on the deployment.

The IAC-3014 media converter is designed for deployment at industrial sites. With DIN-Rail mounting, you can easily mount the industrial media converter at your sites. The media converter supports two DC power inputs to provide redundancy and prevent any possible power loss and Relay output to serve as an alarm.

The IAC-3014 media converter supports extended working temperature from -40°C to 75°C to withstand against harsh environment for a better performance. It is designed for surveillance network system integrators, who have the needs of implementing fiber optical Ethernet networks over long distance for wide-area surveillance solutions with the demand of wide operating temperature, and are looking for an effortless and robust Gigabit media converter.

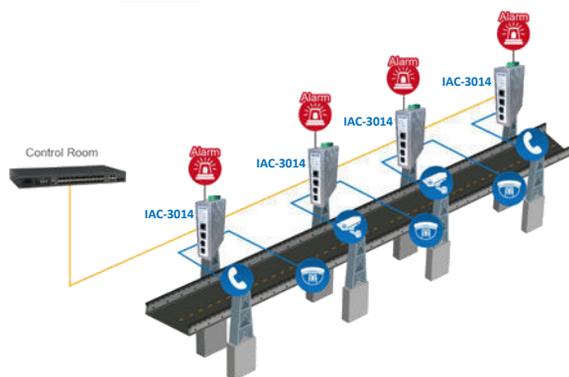

The IAC-3014 media converter supports three different operating modes and provides system integrators the flexibility to design their networks under different applications with the same product, thus lowering the complexity of their operation and the inventory pressure.

Application Diagram

Scenario 1: Bridges/Tunnels

A long-distant area in need of a surveillance system can sometimes cause extra costs during the deployment. CTS' brand-new industrial converter, IAC-3014, supports **switch mode**, which enables the converters to build a chain network easily and solves the problem.

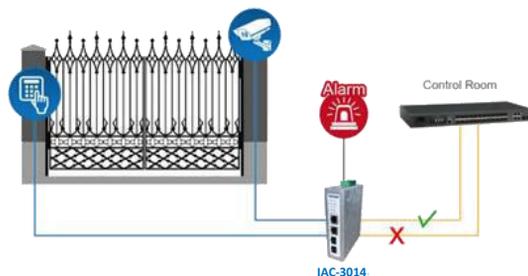

Scenario 2: Public Venues

With the uprising trend of mobile devices, more and more public venues provide free Wi-Fi broadband to satisfy their customers. At the same time, the security of surveillance systems cannot be compromised. CTS IAC-3014 supports **dual media converter mode**, which separates the traffic for different purposes (e.g. Public Wi-Fi and Surveillance).

Scenario 3: Highly Secured Places

At highly secured checkpoints, malfunction of the surveillance systems might cause severe damage beyond imagination. CTS IAC-3014 supports **fiber backup mode**, which enables the system to work smoothly if a fiber cable link is down.
